

Ferroller®

A single-mode or multimode fiber optical interconnect with ferrule and holder in one solution.

- » No epoxy
- » Removes single largest cause of connector failure
- » Single-mode optical performance
- » Significantly better environmental performance
- » Fiber holding "hole" diameter same as that of fiber
- » Laser-polishable fiber end face
- » Precision outer diameter and fiber position concentricity
- » Combines ferrule and holder into single unit, eliminating assembly step and reducing bill of material (BOM)
- » No need for "tuning" fiber position in assembly
- » Dual electrical/optical connection
- » Potential field installation

Headquarters & Manufacturing
411 Coral Circle
El Segundo, CA 90245
